

Liberty Interview Recorder

The Simple Choice for Interview Room Digital Recording!

The Liberty Interview Recorder is a standard Windows PC based digital recording solution that digitally captures interview audio and video, creating a single digital file. After a recording is complete, the file can be moved to the client's network, a CD, a DVD, or any other PC-compatible storage media for review, distribution, or storage. The Liberty Interview Recorder is designed to replace antiquated VHS machines, tape decks, and DVD recording devices still used in some interview rooms.

The Liberty Interview Recorder application is designed for ease of use and reliability. Simple tape recorder style controls and icon buttons are used for basic recording operations such as Record, Pause and Stop. The Liberty Interview Recorder is the ideal solution for interview rooms that require a simple system that can be used without the need for specialized training or support.

The solution even allows the user to establish "cue points" or "point-in-time" bookmarks within the recording file. These bookmarks may be created in real-time, as the session is recorded, or after the session is complete. The bookmarks allow users to instantaneously jump to any of the established bookmark points within the file. There is no need to rewind.

Highlights

- Video recordings include integrated note taking facility with bookmark cue points.
- Every video frame is encoded with a time and date stamp.
- Instant re-cue for playback; no more waiting for fast forward/rewind functions.
- Redundant copy may be written to secondary media including CD/DVD, memory stick, flash card, network drive, or USB drive.
- Integrated text search and retrieval facility.
- No-cost Transcription program available.

Liberty Interview Recorder Features

- A comprehensive display of recorded audio and video provided in real-time, as the interview is recorded.
- Support for multiple discrete audio channels to allow for multiple microphones and eliminate talk-over.
- Integrated note taking with a standard keyboard support.
- Network Ready! Recordings may be saved simultaneously and automatically to a network file server.
- A network file server configuration also allows authorized remote staff to monitor the recordings and the associated notes.
- Audio, video and associated notes are all saved into a single file, consolidating all of the data into a single file.
- Complimentary playback application for transcription.
- The ability to superimpose a time and a date stamp and a label such as "Police Interview Room A" onto the video of a recording.
- The ability to create single or multiple DVDs of an interview.

Flexible Design

- The Liberty Interview Recorder solution can be configured as a standard Windows PC based solution or as a stand-alone appliance based solution.
- The solution can be configured to operate with a touch screen.
- The solution can utilize existing hardware such as in-place microphones and cameras, or can be configured with new cameras and microphones.
- The software has the ability to save the recording into a standard format at various resolutions, including 320 X 240.

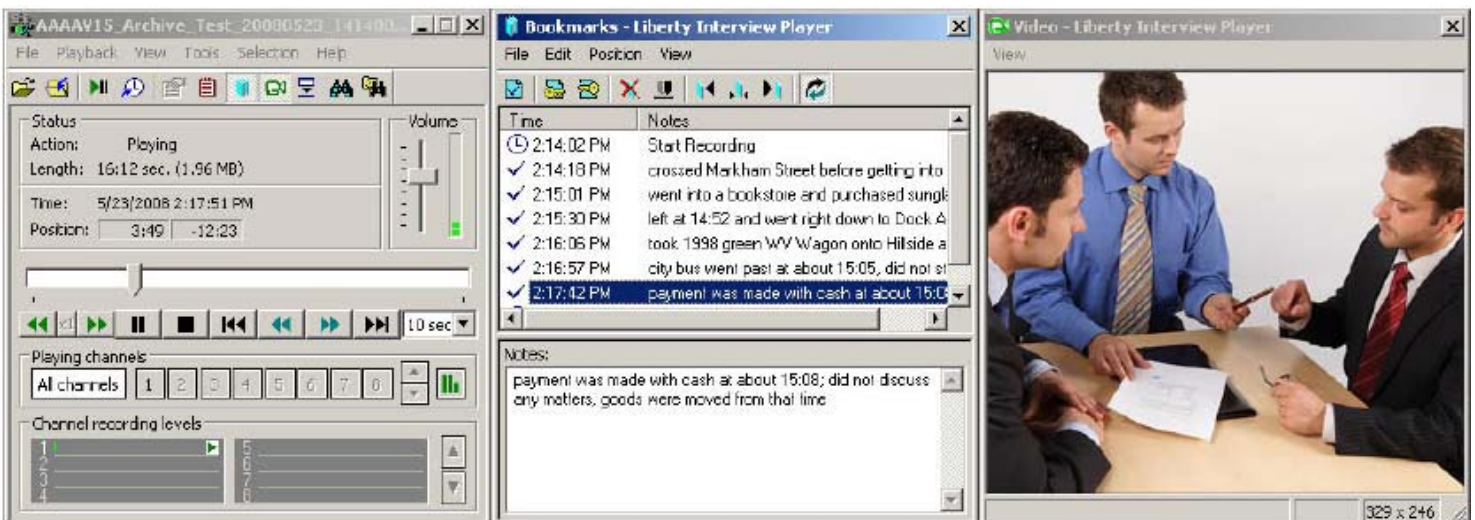

Reliability

The Liberty Interview Recorder includes a number of design highlights required for mission-critical applications such as interview room recording.

Highlights include:

- Automatically and without operator intervention, saving a duplicate “mirror” copy of the recording file to a separate location.
- The ability to monitor the recording from any number of remote, network attached locations, in real-time.
- The ability to optionally control the recording application and make bookmark annotations remotely through a standard network.
- Integrated Noise Reduction facility and Automatic Gain Control to provide the clearest possible recording.
- Design for Windows certified application.

The Liberty Interview Recorder solution provides a seamless, redundant, fail-safe environment.

In the Player application, pictured above, the user may choose to listen to all of the audio channels or individual channels. The video Window may also be opened, or closed. For transcription, playback may be controlled by an available foot pedal.
