

## Notification of Low Sound Levels

An Alert pop-up message can be issued when there are low sound levels on all recording channels.

By default, this option is enabled, to view or turn off, take the following steps:

1. From the main Liberty Court Recorder window, select "**View – Options.**" On the left side of the dialog window select, "**Recording.**"
2. On the right click the "Notification during recording" button. The following dialog appears:

Select the "Display pop-up message" checkbox if you want automatic notification when the audio signal is absent in all channels during recording. A pop-up warning message is issued whenever there is an absence of sound in all channels for a specified period.

If this alert is activated, the user should confirm that the system hardware is connected, powered on, and functioning properly. Regardless of the fact the alert has been issued, the Liberty system will attempt to continue recording across all channels and the user may continue by simply clicking OK on the alert Window after the hardware setup has been confirmed.
